Up to 10 blades, in a single order  
3 day turn-around  
Delivery via courier charged separately

## About Dynashape

Probably one of the most familiar names in blade sharpening, especially within the heart of manufacturing country - the West Midlands. 60+ Years in the saw blade business and now streamlined and better than ever for your bottom line. We have the UK's most advanced blade sharpening center, powered by world-leading grinding machinery. Quality doesn't get much better than this.

## Why Choose Us

- **Reduce your down time**  
Industry leading turn-around times thanks to heavy investment in lights-out and robotic machinery.
- **Go longer between blade changes**  
We don't do short-cuts. Every tooth on every blade is ground properly - leaving your blades as-new.

## Get in touch

We're confident we can save your business time & money without compromising on quality.

## New & Bespoke Blades

Pre-cut, blanks and band saw blades. All in stock, from leading manufacturers and ready to ship for next day delivery or collection in most cases. Got a job that needs a whole new level of blade? Our experts can design new tooth geometries based on your materials to enhance a blade's cutting capabilities.

## HSS & TCT Re-Manufacturing

We don't just re-sharpen, our results are so good, we call it re-manufacturing. Dull, lifeless blades come in, super sharp as-new blades go back out - and for a fraction of the cost of a brand new blade.

## Continuous Supply

A unique service that aims to streamline your process - from always having the correct blades for the job, reducing waste and cost, to increasing productivity with a continuous flow of new and sharpened saw blades chosen for your application.

## Tooling

Large selection of shank & bore tooling in stock from leading brands. Manual & CNC in HSS, Carbide & PCD materials. We also offer carbide tooling servicing to greatly extend the life of your cutters.
